

# Blushield Tesla Gold Series

**Active EMF Protection**  
Home, Workplace, Out & About

**Intelligent Technology**

*Putting **Wi-Fi** in schools; allowing **cordless phones** that radiate constantly to be manufactured; placing **wireless baby monitors** near an infant; using a **wireless tablet, smart phone** or **computer** while pregnant; holding a **cell phone** next to the head and keeping a cell phone in a bra or hip pocket or under a pillow; placing **cell phone antennas** near homes, schools and on hospitals; metering electricity, water and gas with **wireless smart meters** and designing **smart appliances** for the home will be viewed by future generations as **dumb technology** generated by **greed** for a population that is largely ignorant of the consequences. We need to protect the health and wellbeing of future generations, because without them there is no future! If we don't do it... who will?*

Associate Professor Dr Magda Havas, PhD, Environmental and Resource Studies, Trent University, Canada

The human-made electromagnetic fields (EMF) from all things electrical, electronic and wireless are so much stronger than Nature's and our own natural subtle fields. Today, it is essential to use 'active' EMF protection, and this is why Blushield is powered with microprocessor technology as 'passive' protection does not have the strength.

When you plug in a Blushield or switch on one of the portable products, millions of frequencies within the human responsive range are emitted for a few seconds every 30 seconds to keep you in a coherent field which the body responds to. This is called 'sympathetic resonance'. Your body would much rather respond to natural frequencies than the signals emitted from EMF devices such as wi-fi, mobile phones and antenna towers, smart meters and the many other EMF sources that now surround us virtually all day and all night every day.

Scientists world-wide are calling for 'white zones' - no EMF environments - to be established around the world, however, this means living with no electricity and no wireless devices. With plans for 5G to cover the whole planet, 'white zones' will not be achievable as there will be no place to hide from EMF. With Blushield revolutionary scalar wave technology you are still able to use modern-day technologies with no interference - Work Live Play in a *bluzone*...

Just as EMF can affect every cell at once, with adequate protection, Blushield can protect every cell at once utilising crystal photonics to generate scalar fields, resulting in advanced EMF protection. Blushield 'active' technology restores the environment, safely reducing the EMF radiation absorbed, to enable the body to maintain balance.
